Trio of Ex-Tiger Cagers Star at Troy

een a thorn in the side of the oposition for the Troy State asketball team. Both have playd outstanding ball with each haring moments of glory and iumph at some time during he season. At the start of the current ampaign, Jacobs was very much in contention for a starting position. Danford, however, was floundering around with the third five of a 15-man squad. Rated the "dark-horse" player on the squad, Danford improved rapidly and after the first few games moved from the tail end f the squad into a starting berth. Coach Serfustini's confidence in this player was rewarded by an excellent brand Charles, one of the fastest and quickest acting members of the team, scored when scoring

as needed and played excellent defense when good defensive play was necessary. He suddenly

became the man of the hour became the man of the hour for his coach.

ROLAND POWELL

For Charles Danford there can be only one thing, and that is an excellent future in basket-ball. Only a sophomore, he has two more years of eligibility return only 5'6" tall, he looks as if he two more years of eligibility return only 5'6" tall, he looks as if he two more years of eligibility return only 5'6" tall, he looks as if he two more years of eligibility return only 5'6" tall, he looks as if he two more years of eligibility return on the team, he can be stated feeling to sake the present time. They have an end position for Coach William Clipson and when the hoopsters take over during the winter, he moves to the center position. Quite a bit of the hardwood game. Harry "Red" Jacobs, the second member of this duo, has ived up to all predictions. Rate of one of the best ball-hawks.

In the Tampa came which is lost at times against much taller foes. However, in most of the hardwood game.

Roland has played a great deal the team's success can be attributed directly and indirectly son, his first in college basket.

To the opposition, Quite a bit of the team's success can be attributed directly and indirectly son, his first in college basket. is lost at times against much the hardwood game. d one of the best ball-hawks In the Tampa game, which is ball. Very few players are able share of the work.

Monroe Fuller Farm-Goodman Community

UNITED STATES

The United States calf crop in 1955 totaled 43,001,000 head, 1 percent more than the 42,601,000 head born in 1954. This is the sixth successive increase over the preceding year since the number of cattle began to show an upward trend beginning in 1949. The 1955 calf crop was 20 percent larger than the 1944-53 average.

Cows and heifers 2 years old and older does not include all the heifers which gave birth class sections of the state.

The United States calf crop in 1955 totaled 43,001,000 head, the heifers which gave birth to calves during the year. The planting of Irish potatoes has started in the southwestern counties. Land praparation is underway in other southern counties, as soil conditions permit. Farm activity in the nore water and give 3.5 percent more water and give 3.5 percent more water and give 3.5 percent more milk than animals water—with that one inch of topsoil taken from one acre of ground by the dot farmer cooperatives.

Experiment Station led to the counties, as soil conditions permit. Farm activity in the nore water and give 3.5 percent more water and give 3.5 percent more milk than animals water—with that one inch of topsoil taken from one acre of ground by the dot farmer cooperatives.

TORNADO SAFETY RULES

TO KNOW WHAT TO DO WHEN A WARNING IS RECEIVED. OR A TORNADO IS OBSERVED, MAY MEAN THE DIFFERENCE BETWEEN LIFE AND DEATH!!

There is no universal protection against tornadoes except caves or underground excavations. When ime permits, go to a tornado cellar, cave, or underground excavation which should have an air outlet o help equalize the air pressure. It should be kept fit for use, free from water, gas, or debris; and eferably equipped with pick and shove

If you are in open country

Move at right angles to the tornado's path. Tornadoes usually move ahead at about 25 to 40 miles 2. If there is no time to escape, lie flat in the nearest depression such as a ditch or ravine.

If in a city or town:

Seek inside shelter, preferably in a strongly reinforced building. STAY AWAY FROM WINDOWS! 2. In homes: The southwest corner of the basement usually offers greatest safety, particularly in frame houses. People in houses without basement usually offers greatest safety, particularly in frame houses. People in houses without basements should find other shelter, preferably in a storm cellar, although a depression, such as a ditch or ravine, can offer some protection. If time permits, electricity and fuel lines should be shut off. Doors and windows on the north and east sides of the house may be opened to help reduce damage to the building. Standing against the inside wall on a lower floor of an office building offers some protection.

If in schools:

In city areas: If school building is of strongly reinforced construction, stay inside, away from windows, remain near an inside wall on the lower floors when possible. AVOID AUDITORIUMS AND GYMNASIUMS with large, poorly-supported roofs! In rural schools that do not have strongly reinforced construction, remove children and teachers to a ravine or ditch if storm shelter is not available.

If in factories and industrial plants:

On receiving a tornado warning, a lookout should be posted to keep safety officials advised of the tornado's approach. Advance preparation should be made for shutting off electrical circuits and fuel lines if the tornado approaches the plant. Workers should be moved to sections of the plant offering

Keep caim! It will not help to get excited. Péople have been killed by running out into streets and by turning back into the path of a tornado. Even though a warning is issued, chances of a tornado striking one's home or location are very slight. Tornadoes cover such a small zone, as a rule, that relatively only a few places in a warned area are directly affected. You should know about tornadoes though,

Keep tuned to your radio or television station for latest formade advisory information. Do not call the Weather Bureau, except to report a tornado, as your individual request may the up telephone lines urgently needed to receive special reports or to relay advisories to radio and television stations for dissemination to thousands in the critical area.
